

MYOB Exonet – Retail Point of Sale

MYOB Exonet's advanced point of sale combines powerful retail features with an integrated financial application to provide a total business solution. MYOB Exonet advanced POS provides the functionality required for retail businesses to effectively manage the whole of their business operation including retail POS.

MYOB is making business life easier, with a comprehensive range of Enterprise Business Management services and products designed to help you manage your operation.

Business objective

- Efficient point of sale for rapid transaction support at the front counter
- Strong integration with a powerful back office solution.

Solution

MYOB Exonet's Advanced Point Of Sale Module for mid-sized businesses

Business benefits

- Integrated POS adds to stock control ability
- System designed for speedy transaction support at the Point Of Sale.

Integration

This provides specific retail functionality that is fully integrated with MYOB Exonet 6000. This means that your inventory and debtor management systems will always be live and fully up to date. Your team will therefore be confident with the accuracy of information presented to them from point of sale.

Intuitive user interface

Every retail environment is different, that's why MYOB Exonet's Retail Manager supports a wide range of user interface options. Eliminate the need for a mouse by enabling the function key menu system. Navigate using a standard Windows look and feel with keyboard and mouse. Support for touch-screen technology, barcode scanners, electronic cash drawers and docket printers.

Shift management

Enhanced POS allows transaction parking, shift control & reporting, full transaction log by shift, banking batches and running sales total balance. Shifts and banking can be run in unison or separately. Ideal for high cash environments where till clearing and banking is required during a shift.

Scheduled price changes

Manage promotions or storewide price changes with ease. Pre-load new pricing and schedule both start and stop dates if needed, then print your new barcode labels.

Split payment and delivery on a single sale (optional)

The optional POS Advantage module features enables full processing of Sales Orders in POS. Toggle sales order lines between pay now or pay later, take away now or deliver later. You can also give dollar value discounts to customers, while following the discounting rules you have set up.

Payment groups and payment types

Set up your payment types and payment groups to ensure they're set up to meet your business needs. You can have payments posted to separate GL accounts. Set up payment types for non-bankable payments such as vouchers, loyalty programs, and so on.

MYOB Exonet 6000 – Retail Point of Sale factsheet

EFTPOS integration

MYOB Exonet interfaces with the software provided by the main EFTPOS suppliers. This means your POS is continually upgraded each time your EFTPOS supplier upgrades. Support for upgrading to smart cards or chip-based payment cards in the future is already built into POS.

Security

MYOB Exonet's Point Of Sale provides a password-based logon and allows you to customise workflow and workstation settings for complete control over management authorities. Security of the shift and each transaction are supported with barcode or electronic logon. Ideal for high transaction environments or where the operator is sometimes away from the till.

Handles refunds, credits & account receipts

MYOB Exonet POS handles all types of POS transactions including trade accounts with special pricing. It also handles credits and refunds as part of the transaction process and allows operators to take account receipts for lay-bys or trade accounts.
